INTERCONNECTING AUTOMATION

Custom Automation Direct PLC consulting

Custom Programming

Whether it be the Productivity family, Do-More family, Click family, Direct Logic family, or C-more HMI design we can do it all. We can come to you and work on-site, or simply email us a flowchart of the process and we will email back the code when it is complete.

How to have us do your programming?

The Process is simple! Email us at consulting@interconnectingautomation.com with a brief description, or a flowchart, of what needs to be done. We will review it call or email with questions. After we have a grasp on the project we will give you a quote. If you accept the quote we will need a flowchart or other necessary information we request and we will write the code. When it is complete we will ask for payment and email your code to you! It is as simple as that!!

“Very quick, reasonably priced and efficient. Will go back for the future projects I face.”

- Chris Hilger
